

MSS Commercial Solar PV Installations

Powers Distributing – 95 kW

Powers Distributing is a distributor of beer – 85 brands from 30 different suppliers - to stores and bars in Michigan’s Macomb and Oakland counties. Founded in 1939, Powers has over 250 employees and operates 45 trucks from its warehouse in Orion Township.

Powers Distributing is committed to sustainability in its operations. When building their new warehouse, management decided to install solar panels on their rooftop to both show that commitment and to save money at the same time.

Michigan Solar Solutions installed a 95 kW solar array on a racking system integrated with the building structure during construction. As a result, Powers Distributing turned their roof into a source for 122.1 kWh per year of clean, green energy.

Gary Thompson, COO: *“MSS did a great job with the design and installation of our system. They came in on time and on budget. The system has saved us more than we expected when we started. We would use MSS again.”*

Imagine Cinema, Royal Oak – 40 kW

Imagine Entertainment a Michigan-owned luxury theatre company and operates 9 theatres across the state of Michigan. Their goal is to enhance the movie-going experience and provide each guest with unparalleled customer service, gourmet concessions, power recliners or DBOX Motion seats, and other upscale amenities – like valet parking. So, it is probably not a surprise that such an innovative thinking company would want to put solar panels on their roof.

Michigan Solar Solutions installed a 40 kW solar array on a rooftop racking system integrated with the building structure. The Imagine solar system now produces 48.8 kWh per year of clean, green energy.

Paul Glantz, CEO: *“We were completely satisfied with every aspect of the transaction.”*

MSS Commercial Solar PV Installations

Controller Technologies – 75 kW

Controller Technologies was founded in 1991 with the introduction of the Co-Pilot Data recording device to the Chrysler dealership community. Today, they have expanded to include not only many other diagnostic products, but also flash programming (firmware update) products, medical practice management software, e-Prescription software, general software development, project management and consulting services.

In Fall 2015, Michigan Solar Solutions installed a 75kW ballasted flat roof solar system at Controller Technologies offices in Detroit. The Controller Technologies system produces 86.5 kWh per year of clean, green energy.

Akebono Braking, Farmington – 20 kW

With more than 85 years of brake design and production expertise, Akebono provides the world's automotive industry with advanced braking and noise, vibration, and harshness solutions. Their customers include Audi, Chrysler, Ford, General Motors, Honda, Isuzu, Mitsubishi, Nissan, Toyota, and Volkswagen.

Michigan Solar Solutions installed a 20 kW solar awning system on Akebono's Farmington headquarters. A system like this produces over 25.1 kWh per year of clean, green energy.
